

Fig. 1a

Scanned with a Zeiss DSM 940 SEM at 3.00kV, 7mm, 50x magnification. The image shows a highly textured, porous surface. The file name is L1135-8.TIF.

Fig. 1b

Scanning electron micrograph (SEM) showing a cross-section of a material with a layered or fibrous structure. The image is labeled with technical data at the bottom.

Fig. 1c

Scanning electron micrograph (SEM) showing a dense, fibrous network of material. The image is a grayscale micrograph with a black background and a complex, interconnected web of fine, light-colored fibers. The fibers appear to be randomly oriented and densely packed, creating a mesh-like structure. The image is framed by a black border, and technical data is visible in the bottom left corner.
